

We've Been ThinQing Ahead. Want flexibility and control over your call routing?

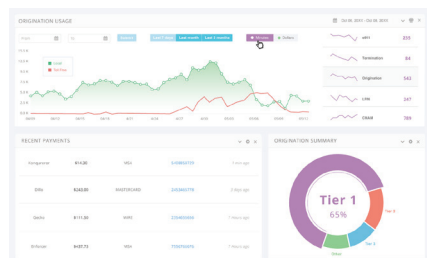

Imagine SIP-based, cloud least cost routing that you can manage. We made it a reality.

Want complete control of your traffic? Take charge with thinQ least cost routing (LCR). Our process is simple: select your carriers, define fraud protection controls, and authorize your IP addresses. thinQ LCR is entirely customizable and completely turnkey with over 30 carrier interconnects.

Once thinQ LCR is customized for your traffic, simply point your switch(es) and it does the rest! With integrated LRN dipping, your calls are always routed accurately based on the destination number's network. thinQ LCR was built to give you peace of mind that your traffic is being handled correctly and per your specifications.

No more time-consuming back-and-forth with carriers. Empower your team to quickly identify and resolve problems with thinQ LCR's integrated real-time CDR monitoring and SIP Tracing tools. Simply search for the criteria you're interested in, select the call, and view the SIP Trace. That's it!

COME ABOARD THE CLOUD

Move into the future of LCR with us. Learn more about thinQ to gain control and flexibility over your call routing.
